PROJECT CASE STUDY

LAMBETH PALACE LIBRARY: THE GREAT HALL

The Great Hall houses part of the internationally important library collection of the Church of England. The project undertook repair and conservation work to stone and brickwork and to the landmark two tier timber framed and lead covered lantern with its gilded weathervane. The interior has been transformed by a new marble floor with underfloor heating and by decorations. New lighting accentuates the magnificent hammerbeam roof.

"...walked and viewed the new hall, a new old-fashion hall as much as possible. Begun, and means left for the ending of it, by Bishop Juxon."

SAMUEL PEPYS JULY 1665
